

MIXING AND APPLICATION SYSTEM, METHOD AND MATERIAL

ABSTRACT OF THE DISCLOSURE

A container with a quantity of coating liquid includes a luminescent pigment and a paint base. An impeller is in proximity to the bottom of the container to keep the pigment in suspension in the paint base. The container also has a linear inlet slot and a linear outlet slot. A feeding assembly includes a supply roll, a take up roll and a plurality of idler rolls to move a plurality of nylon straps from the supply roll, across the take up rolls and through the container and liquid therein and to the take up roll. A drying assembly is provided for nylon straps moving between the outlet slot and the take up roll. Also provided is a method and material.
